

CASE REPORT

AUTISTIC PEOPLE ACTIVATION

This project is implemented through the CENTRAL EUROPE Programme co-financed by the ERDF

AUISTIC PEOPLE ACTIVATION

Summary

The main objective of the project is refine the tools of occupational predisposition and competence diagnosis of people with autism, as well as to present opportunities of building support systems for people with autism and their parents, understood in multidimensional way, to provide conditions for the best development of an individual potential, and aim to make them independent in the future social and professional life, achieving proper self-esteem.

Technology

The innovation in that case is the fact, that there is no place or program in the region, which would allow young people with autism enter the professional life.

Development stage

The model is at preparation level to, in which the necessary research and investigation must be provided.

Market/Opportunity

The research result will be used for establishing an institution for adult people with autism, where all their most important needs will be fulfilled, including social and professional activization, that is contact with other people at the same age. Moreover their families will not have to devote all of their time to look after them, which is the aspect, that gives an opportunity that the project will be successful.

IP

The innovation is not protected by IP
